

Melissa

by NovaSiriGenetics

Early variety

Plant

- Short day variety
- Early and very productive
- Vigorous variety, adapts to different types of soil
- Flowers above the leaves
- Easy harvesting
- Allows to extend the productive season by its continuous flowering

Fruit

- Orange red fruit throughout the production cycle
- Medium size - large
- Maintains caliber throughout the season, despite the high number of fruits per plant
- Consistent fruit texture
- High degree of Brix
- Good self-life

Recommendations

- Plantation frame from 25 to 27 cm
- It is advisable to have a high stand and plantation in the most central area to avoid that the fruit can reach the ground
- Medium - late planting period, according to productive needs
- Requires good ventilation of the tunnel
- Balanced fertilizer is recommended
- Avoid excess nitrogen and do not provide stimulants
- Excess nitrogen can change the quality of the fruit, especially at the beginning of the production season
